

Applying Vinyl Graphic Signs and Lettering Instructions

SURFACE PREPARATION

Clean the surface with alcohol. **DO NOT USE WINDEX OR OTHER WINDOW CLEANERS. THEY HAVE ADDITIVES THAT REDUCE ADHESION.**

APPLICATION STEPS

We suggest you watch an actual installation before you begin applying your vinyl. Open a browser and search "How to install a vinyl graphic" video.

- 1) Place the graphic face down and peel back the protective release liner to expose the adhesive on the decal.
- 2) Very lightly spray the adhesive with a mixture of water and drop or two of dishwashing detergent. **DO NOT SATURATE.** This allows for re-positioning later if necessary.
- 3) Position and lightly press down the very **top edge** of the graphic where it is to be applied, holding the bottom of the graphic out.
- 4) Starting at the center, with a credit card or squeegee, smooth the graphic straight down, then repeat going left and then going right with up and down strokes. **DO NOT ZIG-ZAG.** This can cause bubbles.
- 5) Remove the premask. Starting in an upper corner, peel the premask off diagonally, pulling down, not out. If the decal wants to lift, allow it to sit 10-15 minutes to dry, then squeegee again. We use a medium tack premask so it's not necessary to wet the premask any longer prior to removal.

ProVision Impressions is NOT responsible for damaged vinyl graphics or lettering.

If it has ink or threads on it... we do it!
